

## The effect of tin ion makes the sake delicious and mellow !

Copper has excellent thermal conductivity and when you pour cold sake, it cools down at once. It keeps the coldness.

### Tin 錫

Known as the most expensive metal after gold and silver, tin is very malleable and bendable. Though tin resembles silver in its whiteness, it does not rust nor tarnish easily. Also, pure tin is significantly antibacterial and safe for serving foods. In Japan, it has been said that tin removes the bitterness from Japanese sake as well as other beverages.
